Milestone II: Report

## **Important Decisions**

One of the important decisions our team had to make was having one less team member. The reason for this was that the team member was not being cooperative and not finishing the work that was assigned to them. Due to having one less member for the whole project duration, the team has re-evaluated the goals of the project so it could be finished in time and be feasible.

## **Record of Changes**

### *i. Completed Work*

As per our Milestone II, we achieved in completing the front-end of the main page, front-end for login & signup, back-end for login & sign-up. The team work distribution can be seen under the “Projects” section on our GitHub (<https://github.com/nidhipatell/ParkWise/projects/1>).

Following is a breakdown of the tasks performed by each member:

- Main page: Het Patel and Nidhi Patel
- Login & Sign-up page: Niraj Patel
- Contact us page: Nandini Patel

### *ii. Delaying Requirements/Features/Components*

At this time, we do not have any delays in the requirements as we managed to achieve everything mentioned in iteration II planning.

### *iii. New Requirements/Features/Components*

One of the new features our team decided to implement is to have the ability for users to use Google maps to see nearby parking locations. This would increase the UX and the UI of the website overall. This will allow the users to browse for parking locations easily. This is one of the new features our team decided to add. NOTE: that having one less team member this additional feature may not be met, simply since the workload has been increased on the remaining team members.

### *iv. Removing Requirements/Features/Components*

We have decided to exclude deploying the site since we want to focus on functional requirements. Besides that, we have not decided to remove any requirements since the team was able to achieve previous tasks and with the team velocity of four members, we hope to complete the major remaining tasks.
